

Hi, it's Rose Han here! You may have come across my videos on YouTube, but if you haven't, feel free to check them out using this <u>link</u>. I'm a financial trading expert with years of experience in the market, primarily focusing on trading stocks, ETFs, mutual funds, and cryptocurrencies.

My approach is built around identifying trading edges. Over the years, I've honed this strategy by concentrating on institutional order flow and tracking big money movements. Early on, I refined my process by analyzing my trades, eliminating costly errors, and finding patterns in my successful trades. This led me to develop a search engine that quickly and efficiently identifies profitable opportunities.

In the past few years, I've continued refining my systematic trading approach. It focuses on structured steps, minimizing errors, removing emotions from decisions, and ensuring the process can be replicated. My trading technology, chat room, and educational resources are all centered around this powerful system!

#### Market: An Overview

Understanding the broader market is essential to successful trading, as more than 75% of stocks tend to follow its overall direction. Accurately predicting market trends is key, as it determines whether a trade is likely to succeed or fail. My trading strategy is based on both long-term and short-term market analysis, with a strong foundation in technical analysis. I use core tools like trendlines, support and resistance levels, major moving averages, and price patterns to form my market outlook.

For short-term trades, I prioritize price patterns and tend to avoid major moving averages on intraday charts, as they can sometimes be less reliable for quick trades. One common mistake that novice traders make is focusing too much on individual stocks based on headlines or personal preferences, while ignoring the broader market movements. This is risky, as the overall market direction heavily influences stock performance. I always establish

a clear market bias before selecting individual stocks to trade. If the market is bullish, I look to buy the strongest stocks in the index at the ideal moment.

Instead of relying solely on the traditional RSI (Relative Strength Index) to assess stock performance, I compare recent price action to the S&P 500. Stocks that maintain their strength or rise during a market downturn show relative strength, which can indicate institutional accumulation. This is a powerful signal of a stock's potential, as institutional buying can support price stability even in a weak market. When the broader market recovers, these stocks often outperform, offering greater profit potential due to their resilience during declines.

To simplify my approach and provide greater support to everyday traders, I've divided my services into two key strategies: copy trading and market prediction. These allow traders to benefit from my expertise, whether they prefer a hands-off approach or active involvement in their trades.

## Copy Trading: An Overview

Copy trading is a simple and effective way to automatically follow the trades of experienced traders like me. By copying my trades, you benefit from my market expertise without having to make decisions on your own. You can leverage my strategies while still maintaining control over your own investment goals.

Once you choose to copy my trades, every trade I make—whether buying or selling—will be mirrored in your account. The trades are executed simultaneously and scaled according to the size of your account in relation to mine. For example, if I invest \$5,000 in a stock and your account is smaller, you might invest around \$200 to \$300, depending on your balance. This proportional approach helps manage risk while giving you the opportunity to grow your account.

One of the key advantages of copy trading is that it allows you to access professional strategies without doing all the hard work yourself. It also offers flexibility, as you can diversify your portfolio by following traders across various markets and asset classes.

If this sounds like a good fit for you, I'd be happy to guide you through the process. I'll ensure everything is set up properly and tailored to your goals. Copy trading can make investing easier while still providing a great opportunity to grow your investments.

### Market Forecasting: An Overview

As a market analyst, my primary objective is to help you navigate the financial markets with confidence. I specialize in forecasting market movements and trends through a combination of technical and fundamental analysis, along with advanced trading algorithms. One of my key strategies is live scalping, where I make multiple trades within short timeframes to capitalize on small price fluctuations. This method is designed to generate consistent returns while minimizing exposure to prolonged market risk.

I offer a range of services, including trend analysis, price forecasting, risk management, and trade recommendations, all aimed at improving your trading performance. One of the key advantages of my service is the speed and precision with which trades are executed. Depending on market conditions, I typically place trades within a 30-second to 5-minute window, averaging about 5 to 10 trades per day. This approach allows you to benefit from market insights without spending hours in front of your screen, focusing on quality over quantity.

In addition to executing trades, I provide real-time market insights and predictions in an active live chat room. This space offers an opportunity to connect with other traders, share experiences, and engage in discussions about various strategies and market movements. It's a community-driven environment perfect for asking questions and learning in real time.

To support your trading journey further, I provide daily educational content explaining the rationale behind each trade. This is designed to help you improve your own decision-making process by learning how I approach the markets. My goal is not only to help you make trades but also to equip you with the skills and knowledge needed to become a more successful trader over time.

## Charges: An Overview

While my services aren't free, they stand out from the typical monthly membership fees others charge, which can range from \$100 to \$500. Instead, I use a commission-based model where I charge a **10% commission** on profits generated from my analysis, whether you're using my copy trading or market prediction services. This fee is applied every 30 to 90 days. The benefit of this approach is that it's completely transparent—I only get paid when you make profits. This ensures that both my team and I are fully motivated to provide the best possible analysis and support to help you achieve positive trading results.

#### Free Trial and Conclusion:

I offer a **free trial** for both of my trading services—copy trading and market prediction. This trial allows you to experience how my strategies work on a live account without any upfront cost, giving you the opportunity to evaluate my services risk-free.

During the trial, you'll get to see firsthand how I execute trades, observe my profit-to-loss ratio, and understand the quick decisions I make in the market. I'll also provide educational insights to help you learn my methods and develop your own trading skills for the future.

# life-changing success stories

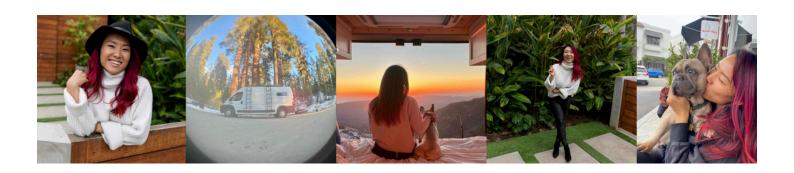

#### In The Money

"Rose's teaching style is unmatched. She is so clear, easy to understand, and uses relatable examples to help drill in key concepts. I especially love how she shares her trading screen to show us exactly how to do things step-by-step. I also love how she creates cheat sheets for us to follow. Definitely the best course I've ever taken in my life, 1000% worth the value, and something I would hands down recommend to a friend (actually I already have). Without Rose, I never would've understood such a monster of a topic like option trading. "

MELODY T.

To freedom,

Rose
